

TEKTITES BOWLS, 2016

Studio Furthermore

Tektites are a collection of ceramic works by Studio Furthermore. A close relative of glass, ceramics are woven into the fabric of our anthropology and will play a certain roll in our material future. Delighted by the promise of such versatility Furthermore decided to investigate the use of ceramic foams. Ceramic foams have been used in applications such as mirror mountings on space telescopes as well as the heat shielding that aided NASA's space shuttles to re-enter the Earth's atmosphere unsinged. The designers decided to replicate ceramic foam production by developing a craft scaled polymer replica process.

Porcelain, already considered to be a superior clay, differs slightly from parian in so much as parian contains a higher proportion of mineral feldspar. When fired, the high feldspar content glasses into a smooth, strong, self-glazing material by means of the vitrification process. What results is a tough ceramic that is highly impermeable to liquids.

Pigmented porcelain

ø 13 × 9 cm – Small

ø 19 × 12 cm – Large

Bespoke sizes and colours upon request

£ 130.00 excl. VAT – Small

£ 260.00 excl. VAT – Large
