

BROKEN RIM BOWL, 2019**Jochen Holz**

One of the processes Jochen uses is to crack glass tubes in half, this crack is often uneven as there is a chance element to the way the crack travels along with the glass. He uses these irregularities to make unique shapes by melting and deforming the uneven rims, and further emphasises this by applying a coloured edge to the rim.

Clear and coloured borosilicate glass

ø 10 × H 10 cm

Each unique can be made to order

£ 150.00 excl. VAT
